

#1 in Heavy Duty Lifts

PROUD TO SERVE THE U.S. MILITARY

Performance, Durability & Safety

Stertil-Koni proudly supports the U.S. Military by delivering award-winning mobile lifting systems ideally suited for servicing light, medium and heavy tactical vehicles. Domestically, our lifts have been used at:

- Fort Bragg
- Camp Lejeune
- National Guard Bases
- Quantico
- Red River (MRAP University)

Stertil-Koni lifts also remain hard at work at U.S. Military locations around the globe, outperforming other lift applications in the harsh environments of the theater.

Added Benefits & Flexibility

For added flexibility, Stertil-Koni Multi-purpose Adapters can help customize your Mobile Column Lifts to fit virtually any vehicle size or type. They also can deliver front-and-rear lifting for wheels-free maintenance.

GSA Advantage!

Tough & Ready

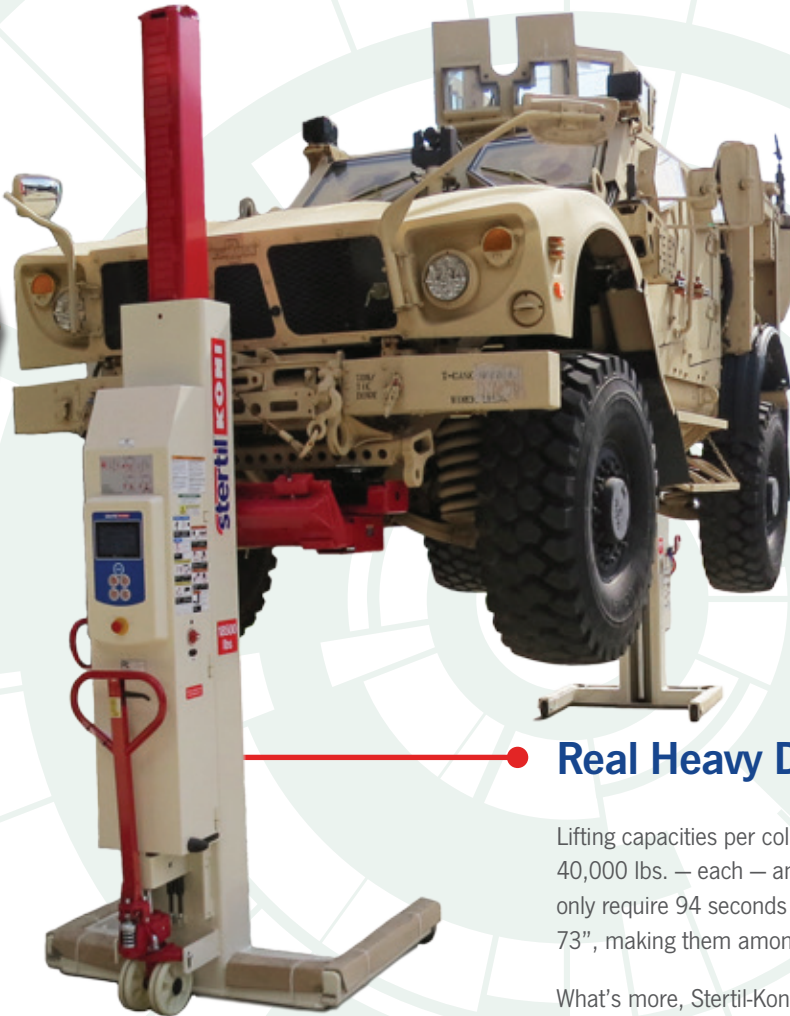

Stertil-Koni award-winning Mobile Column Lifts are ideal for U.S. Military applications.

These lifts feature state-of-the-art hydraulic technology, are manufactured with high tensile DOMEX steel, come with a full-color touch screen control console on all models, are equipped with a super-safe mechanical locking system and have an overload protection and synchronization system as standard.

Superior Service

In terms of support, Stertil-Koni has a highly trained, fully dedicated North American distributor base focused on heavy duty vehicle lifts and service. So consider this: the average tenure of a Stertil-Koni distributor is 14 years and we provide 100% factory trained service technicians.

Real Heavy Duty Capacity

Lifting capacities per column range from 14,000 lbs. up to 40,000 lbs. — each — and our most popular Mobile Column Lifts only require 94 seconds to reach a maximum lifting height of 73", making them among the fastest and tallest in the industry.

What's more, Stertil-Koni lifts offer standard 14" forks that are up to 2" longer than other systems and provide optimum dimensions for large vehicles with 1600R 20 inch tires.

KEY LIFT FEATURES

- Full-color touch screen control console with real-time lift feedback as standard
- Safety locks mechanically engage every 1.3 inches
- Standard "park on lock function" mechanically locks the Mobile Column Lifts at any desired height for added safety
- Available in three models: Wireless and EARTHLIFT, with no interconnecting communications cables, and Cabled
- Conveniently powered by rechargeable NSN6140 01 4575469 batteries — commonly referred to as Optima "Yellow Tops," readily available on most Military bases, and recharged using a standard 110V wall outlet
- Lifts are third-party tested and validated by ANSI/ALI ALCTV (current edition)
