Mobile Lift Options

Adjustable Forks:

Retractable Wheels: integrated in the base frame, retractable wheels reduces the floor surface pressure and improving column stability.

Wheel Adapters: for models that do not have adjustable forks, reduction sleeves are available to lift vehicles with small wheels, such as vans and automobiles. Vehicles with wheel diameters from R-12 to R-15 require two wheel adapters per column. Vehicles with wheel diameters from R-15 to R-17 require one.

Extra Wide Forks: Specially designed for vehicles with very wide tires, this model is only available in the ST1082. the extra wide-forks can handle wheel diameters up to R24.5 with a tire outside diameter up to 63".

Base Frame Extensions: in combination with fork extensions (20" long) are available to lift vehicles with in-set wheels. They are available for models ST1060, ST1073 E & F and ST1082 E & F models only.

Remote Control: allows the operator to manipulate the control system from any location. Explosion remote control is compatible with all control systems. It comes equipped with emergency stop and has a 33' cable.

Crossbeams: customers wishing to lift by the chassis and thereby free-wheel are able to use crossbeams for wheel free lifting of trailers, trailer lifting at king-pin coupling, and extremely low profile vehicle lifting (Van Hool type buses or many standard transit buses). They come with (2) sliding saddles with various types of heads to accommodate different chassis designs.

Lighting: consisting of two IP-67 rated 36 watt fluorescent fixtures, lights are available on all mobile lifts manufactured by Stertil-Koni, except battery powered models. These lights ensure that the work space around the mobile lift is well illuminated.

Light Truck/Humvee Adapter: This automotive adaptor permits lifting by chassis (3 pieces) with capacity of 15,000 lbs. per adapter.

Fork Lift Adapters: Using two columns, any forklift weighing no more than the capacity of both columns can be safely lifted with specially designed drive-on runways. Ramps available for 3 or 4 wheel fork lifts.
