

ST 1082 Wireless 18,000 lbs.**ST 1082 WIRELESS COLUMN LIFTS MODEL SPECIFIC FEATURES**

A set of ST 1082W mobile lifting columns has a control box on every column, enabling operation from any of the columns. It is possible from any column to operate the columns individually, in pairs or as many as 8 columns together. The control boxes are standard IP 65 splash proof. With one set of four lifting columns you have a lifting capacity of 72,000 lbs. at your fingertips.

The ST 1082W is specially designed to hoist vehicles such as buses, heavy trucks and aircraft tractors. The system is standard capable of expansion to a maximum of 8 columns per set.

Optionally, the use of an adjustable fork is possible. This avoids the need for wheel adapters. The pick-up fork has a length of 14 inches. This enables vehicles fitted with super single drive axle tires to be picked up. The ST1082 has a lifting height of 69 inches. With a lifting time of just 94 seconds, the ST 1082 wireless is one of the world's fastest lifting columns
