

ST 1065 Wireless 15,000 lbs.**ST1065 WIRELESS MOBILE LIFTS MODEL SPECIFIC FEATURES:**

Each electro-hydraulic lifting column is rated at 15,000 lbs. and is fitted with a control box that allows all the connected columns (to a max 8) to be operated from every individual column. The control boxes have a patented slow-lowering function, for the accurate alignment of transmissions etc.

To cater for large wheel diameters & broad tire treads the new lift has specially extended and wider, fixed pick-up forks. These modifications now allow vehicles with 31 - 72 inch tires and tread widths of up to 20 inches lifted to a maximum height of 69 inches in 89 seconds, with the minimum of fuss - all you require is a power supply, a flat floor and adequate headroom. Should you wish at any stage to lift vehicles with smaller tire dimensions, then the pick-up fork widths can be reduced by sliding reducer plates onto each of the pick-up forks.

Stertil -Koni manufactures innovative hydraulic vehicle lifts that are known for their, long life, safety and energy saving features. available are:options,brochures,videos,pictures
